

About the Pfizer Vaccine, Contraindications (reasons to not have it) and side effects:

- mRNA vaccine like the Oxford vaccine – different only in how it is delivered to the body's cells – otherwise it's basically the same in the biological way it works.
- Contraindications:
 - Anaphylaxis (severe life-threatening allergic reaction which requires patient to carry epipen or similar) to: Vaccines, Medicines or Food
 - Pregnancy, breast feeding, planning to get pregnant in next 2 months
- Side Effects
 - 80% injection site pain
 - 60% mild fatigue
 - 50% mild headache
 - 20-30% chills, muscle or joint pain
 - 10% fever
 - 2-4% above symptoms that are bad enough to stop usual daily activity
